# HOW DOES CLIMATE CHANGE AFFECT EDUCATION ?

- Extreme weather events (droughts, floods etc.)
- Poor harvests and food scarcity
- Adaptation to climate change by income supplementing activities of household members, migration and child marriages
- Root-cause to conflict, leading to forced displacement, or exacerbates conflict dynamics

# *What is the impact of education on climate change ?*

- Education is a critical agent in addressing the issue of climate change
- Teach the impact of global warming and learn how to adapt to climate change
- Education empowers all people
- Motivates the young to take action
- To raise awareness and promote climate-friendly innovations for sustainable development
- Build a resilience to climate variability and environmentally conscious populations motivated by sustainable development actions and strategies

**THANK YOU FOR ATTENTION !!**
