

## **KLIMOS-Toolkit**

### Introduction

Jean Hugé –Bruno Verbist - Tom Waas

## **Sustainability Assessment (SA)**

- ” Turning discourse into action
- ” Integrate SD in Decision Making  
⇒SD as decision making strategy
- ” Through SA
- ” Toolkit form of SA

## Objectives Toolkit

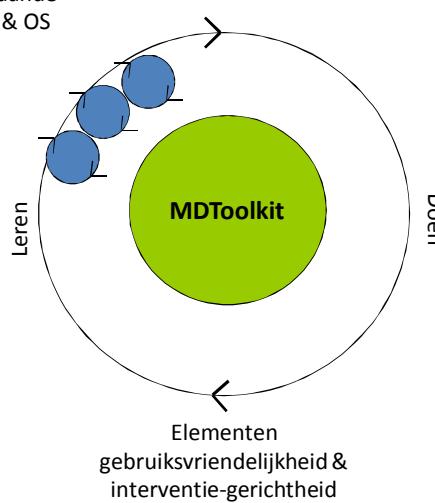

Enhance the **integration of environmental and sustainability issues in Belgian development cooperation** by developing a “**user friendly**” environmental and sustainability **Toolkit**

- Substantive
- Learning
- Evaluation
- Forum for discussion (administration, govs, local stakeholders, ...)

## Method: Action Research

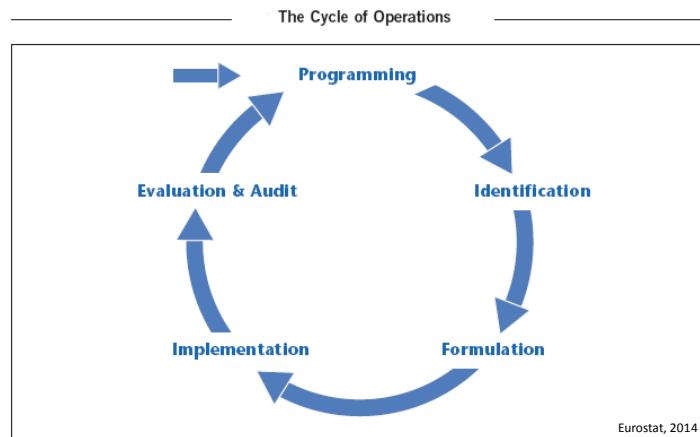

Inventarisatie bestaande instrumenten MD & OS

**KLIMOS - Generating Capacity for the Sustainability Transition**

**KLIMOS Environmental Sustainability Toolkit**

The toolkit provides information in support of environmental mainstreaming in development cooperation and can be used as a learning instrument or for assessment (ex-entities post evaluation).

The toolkit consist of two parts:

- 1) Screening forms (a short quick scan and a screening guide)
- 2) Database

The database and screening forms can be used together (i.e. to retrieve information to complete a screening form), or separately (i.e. to retrieve information without using a screening form or to complete a screening form without using the screening forms).

**DATABASE**

The database contains easily retrievable environmental information, organized along four access criteria: country, theme, sector and publication type. The criteria can be combined to narrow the search function.

**SCREENING FORMS**

The screening forms consist of several guiding questions to consider various environmental issues in development cooperation.

- The quick scan screening form allows for a (first) environmental assessment when a more extensive assessment is not feasible (e.g. due to lack of time, resources, available documents) or only limited resources are available (e.g. time constraints and knowledgeable assessors).
- The screening guide is suited when a more in-depth and robust environmental assessment is appropriate (e.g. more time available, more knowledge about the environmental context, more resources available). The screening guide follows the four policy cycle phases (identification-formulation-implement-evaluation) and is divided that way. For each phase a corresponding form is available:
  - Screening guide identification
  - Screening guide formulation
  - Screening guide implementation
  - Screening guide evaluation

Do you also think that development aid should pay attention to the environment and climate change? Environment and Climate Change are important Sustainable Development Goals.

There is a chance to make your voice heard!

The KLIMOS Toolkit has been submitted for the public award in the "Price O4D (Digital for Development)".

## Format: Database

The screenshot displays the KLIMOS Environmental Sustainability Toolkit: Database. At the top, there are dropdown menus for 'Country / ALL', 'Sector / ALL', and 'Theme / ALL', followed by a 'Search' button. Red arrows point to each of these three dropdown menus. Below the search bar is a list of document titles, each with a small circular icon and some descriptive text. On the left side of the page, there is a sidebar with logos for ULB, Universiteit Gent, Universiteit Antwerpen, and UCL, along with links for KLIMOS seminars, Workshops/Courses, Publications, Case studies, KLIMOS in the media, Contact, Links, and Toolkit.

## Screening Notes

- ” Quick scan
- ” Screening guide identification
- ” Screening guide formulation
- ” Screening guide implementation
- ” Screening guide evaluation

## Impact vs Risk !
